

Vehicle Inventory Quick Guide

General Objective: Explain in a fast and accurate way the basic steps of the Vehicle Inventory Module and its different options.

Main Sections

1-Vehicle Inventory Entry	During this section the user will be entering the information of the vehicle that is going to be shipped also; the system will generate a WR entry after the status of the vehicle change to Received .
2-Reports	Throughout this section the user will be able to generate different types of reports.

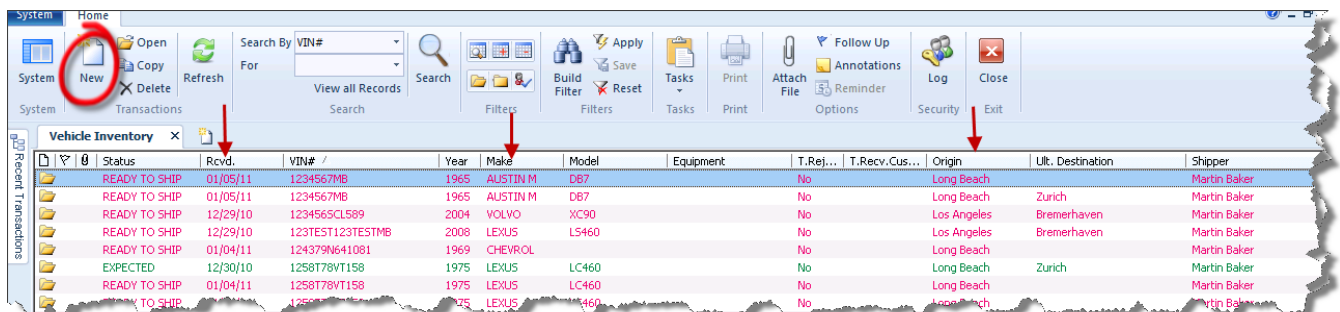

1- Vehicle Inventory Workflow

Window # 1

Once you click on the section as shown on the window # 1, a new list screen will appear showing all the records previously entered within the **Vehicle Inventory**. This list can be arranged in ascending or descending order, by clicking on the different fields located at the top Menu of the **Vehicle Inventory**. In order to create a new entry you must click on the **NEW** icon as shown on Window #2.

Window # 2

The Vehicle Inventory Entry starts with the window#3 which will show at your screen after clicking on the New () icon located in the **Home Tab (Window#2)**. The user may use the magnifying glass () to make searches, additions, deletions and updates.

Window#3

Vehicle Inventory– New Record ()

The screenshot shows the 'Vehicle Inventory - New Record' window. It contains several sections with numbered callouts: 1. 'Wr Number' field; 2. 'Mode' dropdown menu; 3. 'Hold Vehicle' checkbox; 4. 'Status' dropdown menu; 5. 'Vehicle Details' section including 'VIN Number', 'Year', 'Make', 'Model', 'Trim', 'Body', 'Color', 'Engine', 'Condition', 'Type', and 'Other'; 6. 'Decode' button; 7. 'Keys' field; 8. 'Vehicle Documents' section including '*Title Received', 'By Mail', 'Docs Exist', 'Number', 'State/Province', and 'Rcvd'; 9. 'Inspection' section including 'Number', 'Date', and 'By (Name of person)'; 10. 'Shipping Information' section including '*Shipper', '*Consignee', 'Third Party', 'Origin', and '*Ultimate Destination'. Red arrows point to the 'VIN Number' field, the 'Decode' button, and the 'Number' field in the 'Inspection' section.

*** Be aware that all marked fields with asterisk are required to change the status of the vehicle to *ready to ship*.

1-Warehouse Receipt #	The WR number is generated automatically by the system once the vehicle has been inspected and the status of the vehicle inventory updated to <i>Received</i> , then the information added must be saved in order for the system to generate the WR #.
2-Mode	Select from the dropdown box the mode in which the vehicle will be shipped. (Mostly will be used the Ocean Mod.
3-Hold Vehicle	The Hold checkbox can be used only if the status of the vehicle is <i>Received</i> or <i>Ready to Ship</i> ; after it is checked the status will change to Hold preventing the vehicle from being shipped.
4-Status	This field reflects the different status of the vehicle which is updated automatically by system once the requirements for each of them are met.
5-Vehicle Details	Within this section will be added the information of the vehicle either by the user or by the system if the Decode button is used.

6-Decode	Once the user introduces the VIN # within the Vehicle Details section and then click on the <i>Decode button</i> ; the system will bring automatically the information of the vehicle based on the VIN.
7-Shipper/Destination Tentative & Lien Release required	If any of these criteria is applied to the vehicle, the system will prevent a <i>Ready to Ship</i> Status until they are unchecked. If for example the vehicle is expected and all the requirements for a <i>ready to ship</i> status are completed, the system will not update the status until the criteria is unchecked.
8- Vehicle Documents*	During this section will be added the information included in the title of the vehicle. The user will be able to check either if the documents exist, will be sent by mail or if they were received already which is required for the vehicle to <i>Ready to Ship</i> .
9-Inspection	To complete this section the user must click on the date field and a new window will prompt on the screen to request a confirmation for the inspection in order to generate the inspection number. After doing the inspection and saving the information into the system, it will send a received notification to the parties involved. Please see window bellow this table for more details of this section.
10-Shipping Information*	This section includes Information of the Shipper, Consignee; Third Party also Origin and Final Destination, most of these fields must be completed in order for the vehicle to be <i>Ready to Ship</i> .

Window# 3.1

Inspection (Click on Date to do the Inspection of this Vehicle)

Number: Date: 01/13/11

Please confirm that you are doing an inspection on this vehicle. Do you want to generate the inspection number.

Value \$: 0.00

After the User clicks here the following window will prompt at the screen requesting a confirmation for the vehicle inspection.

Window # 3.2

1-Billing Code	With the help of the magnifying glass the user will be able to find the specific billing code to use.
2-Type	Select from the dropdown box if it is a Prepaid or Collect shipment.
3-Bill Party	Responsible for payment (Shipper/Consignee/Other).
4- Billing Tab	Reflects the selling values. If under Bill Party is selected Other then the user must add the Customer information by using the help of the magnifying glass (Search). Person or Agent responsible for payments.
5- Cost Tab	Cost Values. This section requires the information of the Vendor for the specific charge. User may use the help of the magnifying glass (Search).

Window #3.3

1-Shipping Instructions	With the help of the magnifying glass the user will be able to find the shipping instructions for that vehicle if it was created previously bringing to the vehicle inventory the Information included in the shipping instructions.
2-Title Rejected by Customs	This section will be used in case the title is rejected by Customs also includes the dates on when it was sent and received from the institution. If the checkbox is selected the system will automatically update this section for the rest of the vehicles loaded in the same container because their shipping status will be affected in the same way.
3-Shipping References	Includes shipping reference numbers also if the user clicks on the button indicated at the window above, the system will show the BL in which the vehicle was shipped.

Window # 3.4

With the help of the magnifying glasses select schedule B and HTS codes, which will be used for the SED request in case is needed.

By using the dropdown boxes select Export Code, Lic.Type and Origin.

with * are required to change status to "Ready to Ship"

Cont. Window # 3

1 Change Vehicle Status to "READY TO SHIP"

2 Change Vehicle Status to "TEMPORAL RELEASED"

3 Undo "TEMPORAL RELEASED"

Number: 1062 Date: 01/04/11 Division: LGB Status: READY TO SHIP

Find this section at the Top Menu, superior part of the Vehicle Inventory Window. Once the user clicks on **Tasks** will appear a dropdown box which contains 3 options to update the status of the vehicle.

1-Change status to "Ready to Ship"	This option will allow the user to force a <i>Ready to Ship</i> status in case the record does not meet all the requirements.
2-Change to "Temporal Released"	By clicking this option the user will create a <i>Temporal Released</i> status for the vehicle in case is needed.
3- Undo "Temporal Released"	Reverses the <i>Temporal Released</i> .
4- Save & Close	Saves the information added or edited in the Vehicle Inventory going back to Window #2.
5- Close	Close the window returning to window # 2.

VEHICLE STATUS ADDITIONAL NOTES:

1. **PERMANENT RELEASE.** If by any reason the vehicle is not going to be shipped and needs to be taken out of the Inventory the system provides a permanent release by using the **Warehouse Withdraw.** (Please find more details in the Warehouse Withdraw Quick Guide)

Window # 4

Warehouse Withdraw Linking

This icon is located at the Withdraw Receipt top menu, once the user clicks upon it, a WR linking window will prompt at the screen.

In order to link a vehicle to the withdraw, select the second tab, the user may use the dropdown box to select the "search by" criteria, vehicle inventory record will appear within this area.

Click on this tab once the vehicle (s) is selected, the system will update automatically the warehouse withdraw with the information previously added in the Vehicle Inventory.

Warehouse Linking

Select Warehouses or Vehicles to Link

Note: To partially link a warehouse receipt, click on the (+) to show the detail lines. Double-Click on the pieces to change the link quantity.
